

We utilize three primary systems to meticulously track all locum tenens support and employment statistics: Bullhorn ATS, Attendance on Demand, and iSolved.

1. Bullhorn ATS: As our central Applicant Tracking System, Bullhorn streamlines our recruitment process. It enables us to post locum tenens positions, manage candidate applications, and track the entire hiring lifecycle. With Bullhorn, we can efficiently organize candidate profiles, schedule interviews, and monitor candidate engagement.

2. Attendance on Demand: This system plays a pivotal role in monitoring locum tenens' attendance and work hours. Attendance on Demand allows us to accurately track the time locum providers spend at our facilities, ensuring compliance with contractual obligations and facilitating payroll processing.

3. iSolved: As our comprehensive human capital management platform, iSolved provides insights into various aspects of locum tenens employment. It helps us manage HR tasks, such as onboarding, benefits administration, and employee records management. With iSolved, we can generate reports on locum tenens demographics, performance evaluations, and compliance metrics.

By leveraging these integrated systems, we maintain meticulous records of locum tenens support and employment statistics. This enables us to make data-driven decisions, optimize our recruitment strategies, and ensure the seamless operation of our locum tenens program.
